Escalation Factor =
$$\frac{\text{Index of the "escalated to" date}}{\text{Index of the "escalated from" date}}$$

* See DoD UFC 3-701-01 23 May 2018; Table 4-2: Military Construction Escalation Rates

Note 1: The index from OCT FY1993 (OCT CY1992) through OCT FY2008 (OCT CY2007) is the Engineering News Record (ENR) Building Construction Index (BCI). The ENR BCI is a historical index that tracks the cost of three basic materials and three skilled labor types, but does not account for other pricing influences (such as risk and competition) that impact total delivered price to the project owner.

Note 2: The index from OCT FY2008 (OCT CY2007) through OCT FY2017 (OCT CY2016) is consistent with the DoD Selling Price Index (SPI). The SPI is a historical index representing the average of the RLB Construction Cost Index, Turner Construction Cost Index, and Saylor Subcontracting Index. Saylor ceased publishing their index in OCT 2009, and the BLS PPI for NAICS 236223 is now the third index used in the computation. DoD established the SPI to more accurately represent actual (historical) market escalation as experienced by DoD as the project owner for the type of construction in the portfolio.

Note 3p: The index from OCT FY2018 (OCT CY2017) through OCT FY2024 (OCT CY2023) is projected based on annual rates for military construction budget authority published by USD (Comptroller) in December 2017.
