Figure S.9
Elevation of Horizontal Pressure Plate - Curtain Wall
Stick-Built System (P.E.D)
Outside Glazed

Setting blocks at 1/4 points or as recommended for size of glazing. Must not block drainage.

Drainage slots aligned so that the bottom is flush with or just below the screw spline. To ensure drainage drainage slots minimum 3/8" high by 1" long to provide capillary break. Minimum three per horizontal lite, none in vertical pressure plates/ears.

Note: Weep holes in snap covers shall be offset from drainage slots.

Stainless steel bolts spacing depends on load.
